

	Smart Transfer Milford Person Lift (T-MPL)	Wheelchair Accessible Vehicle (WAV)
Cost	A Milford Person Lift costs around \$5,000 fully installed.	A brand-new vehicle with modifications can cost in excess of \$30,000.
Safety	You can take full advantage of standard vehicle safety systems by being seated naturally, such as locking seatbelts, air bags and supportive seats. As recommended in the International Best Practice Guidelines: BPG1 Transportation of People Seated in Wheelchairs (Revision 1 2019).	The restraints and modifications for your wheelchair will provide your only safety.
Travelling	You are able to sit in the front or rear of the vehicle with your travelling companions.	These vehicles often require you to sit alone in the rear, isolating you from other passengers.
Comfort	You can be seated comfortably with all the usual vehicle luxuries such as air conditioning and heated seats. Drivers can travel at normal speeds and take corners without issue.	You may not have access to all the vehicle's comforts from your seat. The driver will also need to go slower and take corners with extreme caution
Vehicles	A Milford Person Lift can be fitted to your current vehicle or a new one, in virtually any make and model.	These conversions comprise only a limited range of vehicle types.
Discreet	Look and feel like any other vehicle passenger or driver; such an adaptation is subtle and discreet.	You are always on view to the public since you sit in the back of the vehicle.
Economy	You can pick an economical vehicle that saves money on fuel and general running costs.	You are limited to a small range of larger vans or MPVs which can cost more to run.
Transferable	When you get a new vehicle, your adaption can be swapped over.	If you want a new WAV, you will have to purchase the vehicle and all the modifications again.
